

## It's Easy to Switch to Cryoserver Email Archiving

*Moving from another email archiving system to the Cryoserver email archiving solution is easy.*

Keyword: Cryoserver

London, UK – What if your current email archiving program isn't very effective? It's sluggish and awkward. You become bogged down. It's difficult to do searches. You would like to change programs, but you're concerned it will be too difficult. There is a solution. The Cryoserver email archiving system will permit you to effortlessly migrate your emails from almost any current email platform.

Taking the form of an appliance or a software program, Cryoserver's email archiving solution is fast and simple to install. When it's in position, you can move your email files from almost anywhere. "Regardless of which email storage platform you are using, we have various tools that make it easy to migrate the data into Cryoserver," observes Robin Bingeman of Forensic & Compliance Systems, the manufacturers of Cryoserver. "Clients are amazed at how painless the procedure is."

Cryoserver's unique Import Utility will allow a company to import current and legacy emails directly from the Exchange server. The speed of migration differs according to the mailbox and email size – and the date range. A simple user interface operates on the Exchange server, letting organizations survey the entire mailstore and select which mailboxes need to be archived. All legacy data can be imported in a one-time procedure.

The quick migration pace lets you instantly search old email alongside the new data. The older information is forensically tagged so it is labeled as being from the pre-Cryoserver period. The security of the Cryoserver solution means it is appropriate for meeting legal and regulatory requirements.

"If you are stalled out with your existing system, we can help you," notes Bingeman. "Our tools will assist your company with moving emails from other archiving systems." These alternatives include:

- Autonomy ZANTAZ EAS (for Exchange or Notes)
- Autonomy Message Manager for Exchange, Notes & GroupWise (formerly CA Message Manager)
- Autonomy ZANTAZ Digital Safe
- EMC EmailXtender (for Exchange or Notes)
